Professional Summary

.NET Developer with experience building enterprise applications using ASP.NET Core, Entity Framework, ADO.NET, and LINQ. Proven track record in developing microservices and REST APIs with Azure cloud services for production environments. Currently delivering scalable solutions at IBM.

Core .NET Technical Expertise

ASP.NET Core & ASP.NET MVC

- Developed ASP.NET Core 8 and MVC 5 applications for enterprise users
- Built RESTful APIs with Swagger documentation
- Implemented Azure Functions microservices for email notifications and event processing
- Applied performance optimization techniques for API response times

Entity Framework & Data Access

- Implemented Entity Framework Core using Code-First and Database-First approaches
- ADO.NET for performance-critical scenarios and stored procedure integration
- Advanced LINQ querying with method syntax and query syntax for complex data manipulations
- Database management with Azure SQL, and SQL Server in production environments

Advanced .NET Core Features

- Dependency Injection using built-in IoC container with comprehensive DI patterns
- Custom middleware for authentication, logging, and error handling in pipeline
- Azure Key Vault integration for secure configuration and secrets management
- Asynchronous programming patterns with async/await for high-throughput applications

Education

Bachelor of Technology in Computer Science

Aug 2019 – Jul 2023

Jyothi Engineering College, Thrissur

GPA: 7.98/10

- Minor: Mechatronics

Work Experience

Application Developer

Sep 2025 – Present

IBM

- Developing scalable enterprise applications using ASP.NET Core and modern cloud architectures
- Collaborating with cross-functional teams to design and implement secure RESTful APIs and microservices
- Contributing to the modernization of legacy systems, ensuring high performance and code quality standards
- Participating in Agile workflows and utilizing Azure DevOps for CI/CD pipeline management

Software Engineer

Jan 2025 – Aug 2025

Fingent

- Delivered Azure Functions e-mail notification microservice for force-cancel events in 3PL WMS client portal, integrating with Azure Service Bus and Azure Blob Storage for event handling and message logging
- Developed scalable microservices and REST APIs in ASP.NET Core 8 and MVC 5 for 1K+ warehouse users, with monitoring via Azure Application Insights and logging to Azure Monitor
- Utilized Azure Key Vault for secrets management and Azure SQL for transactional data storage in production environments with Entity Framework Core
- Implemented Azure Load Balancer for microservice failover and Azure Front Door for global request routing
- Created automated workflows using Azure Logic Apps to integrate notifications, approval processes, and external APIs across internal enterprise tools

Junior Software Engineer

Nov 2023 – Jan 2025

Fingent

- Assisted in the development and maintenance of ASP.NET Core applications, resolving over 50+ critical bugs
- Collaborated with senior developers to implement RESTful API endpoints and integrate third-party services

- Wrote comprehensive unit tests using xUnit and Moq, improving code coverage by 20%
- Participated in database schema design and optimized SQL queries for improved reporting performance

Software Engineer Intern

Jul 2023 – Nov 2023

Fingent

- Built internal tools in Laravel and .NET Core with Entity Framework used by QA and HRBP teams
- Completed 10+ projects on microservices architecture, observability patterns, and testing frameworks
- Implemented LINQ-based data access layers and ADO.NET optimizations for performance-critical operations

Project Intern

Aug 2022 – Sep 2022

Micro.company (Remote)

- Shipped React add-ons with .NET Core backend APIs increasing productivity by 15%
- Automated reports using Google Apps Script and ASP.NET Web APIs, saving 5 hours/week

Enterprise .NET Projects

Enterprise Microservices Platform | *ASP.NET Core 8, Entity Framework Core, Azure SQL* Jan 2025 – Aug 2025

- Built mission-critical WMS microservices serving 1000+ users with 99.9% uptime using ASP.NET Core
- Implemented event-driven architecture with Azure Service Bus and Entity Framework for data persistence
- Developed comprehensive LINQ-based reporting system with complex joins and aggregations

SynCoLab – Synthetic Collaboration Lab | *Next.js, .NET Core APIs, Docker*

Mar 2025 – Jun 2025

- Built Filecoin/IPFS-based AI agent platform with .NET Core backend APIs and Entity Framework
- Developed UCAN auth system and analytics dashboard with LINQ-based data aggregation

Full-Stack Web3 Applications | *ASP.NET Core, Entity Framework, Solidity*

Aug 2024 – Oct 2024

- Developed NFT marketplace backend using ASP.NET Core Web APIs with Entity Framework for metadata storage
- Implemented complex LINQ queries for royalty calculations and transaction processing

Technical Skills

.NET Technologies: ASP.NET Core 8, ASP.NET MVC 5, .NET Framework, Entity Framework Core, ADO.NET, LINQ

Languages: C#, JavaScript/TypeScript, Python, SQL, HTML, CSS

Data Access: Entity Framework Code-First, ADO.NET, LINQ

Azure Services: Azure Functions, Azure App Service, Azure SQL, Azure Key Vault, Azure Service Bus, Azure Application Insights, Azure Monitor, Azure Logic Apps, Azure DevOps, Azure Blob Storage

Databases: SQL Server, Azure SQL Database, PostgreSQL

Architecture: Microservices, REST APIs, Event-Driven Architecture, Dependency Injection, Middleware Pipeline

DevOps & Tools: Azure DevOps, Docker, Git, GitHub Actions, CI/CD, Swagger, Postman

Frontend: React, Next.js, HTML5, CSS3, JavaScript/TypeScript
